A complete list for all glirids recorded so far from Turkey was compiled based on literary references and recent field records. Distribution maps and a brief summary of the status of each species were presented. In total, eight species of glirids were recorded from 199 localities in Turkey. These records were as follows: *Glis glis* (37 records), *Dryomys nitedula* (100), *D. pictus* (2), *D. laniger* (10), *Eliomys melanurus* (2), *Myomymus roachi* (14), *Myomymus setzeri* (13), *Muscardinus avellanarius* (21).
